(57) **ABSTRACT**

A method, system and computer-readable media for supporting text entry on a personal computing device by activating automated searching to search for completion candidates which are based on a partial text entry received from a user. The completion candidates are displayed in a search list. The user may select a completion candidate from among the completion candidates in the search list to correspondingly modify the partial text entry, or the user may decline all of the completion candidates displayed in the search list and terminate the automated searching. The system may further provide a digital keyboard for use in entering text.
