Re: LG Electronics Mobilecomm U.S.A., Inc. Past and Present Infringement of Zipit Wireless, Inc.'s U.S. Patent Nos. 7,292,870 and 7,894,837

Dear Mr. Hwang:

As evidenced by the enclosed claim charts, Zipit Wireless, Inc. believes that LG Electronics Mobilecomm U.S.A., Inc. has and continues to infringe Zipit's U.S. Patent Nos. 7,292,870 and 7,894,837 in violation of 35 U.S.C. §271 (a), (b), and (c). Zipit believes that LGE's instant messaging devices (smartphones) that generate an emoticon (☺, ☹) in a Wi-Fi ready instant message have and continue to infringe Zipit's '870 and '837 U.S. Patents. Courtesy copies of Zipit's '870 and '837 U.S. Patents are attached (Exhibits "A" and "H," respectively) along with exemplary claim charts that demonstrate LGE's infringement (Exhibits "O" and "P," respectively).

In October 2013, Zipit filed a patent infringement lawsuit against BlackBerry Limited and BlackBerry Corporation in Greenville, South Carolina. In September 2014, BlackBerry filed IPR Petitions to invalidate Zipit's '870 and '837 Patents. On March 29, 2016, however, the U.S. PTAB issued Final Decisions confirming the validity of 100% of the claims in Zipit's '870 and '837 Patents. Following the Final Decisions, the BlackBerry lawsuit settled on confidential terms.

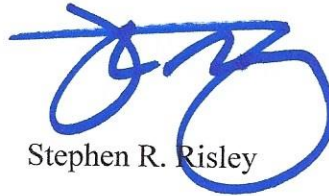

In April 2017, Zipit filed a second patent infringement lawsuit against Samsung Electronics Co., Ltd., Samsung Electronics America, Inc., and Samsung Telecommunications America, LLC in Greenville, South Carolina. Zipit is pleased to report that Samsung is now a licensee of Zipit's Patents, and as a result, the Zipit-Samsung lawsuit settled.

Please let me know when you are available to discuss this matter.

Mr. Jeff Hwang
