ABSTRACT

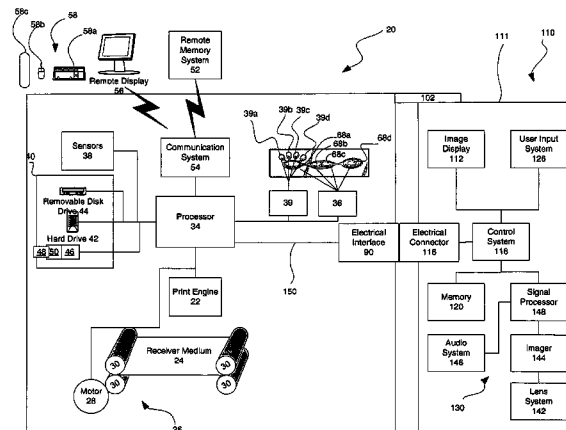

In one aspect of the invention, a printer is provided for use with a display device having images stored in a memory therein, a display device controller, and an image display for displaying the stored images. The printer has an external structure housing a print engine and receiver medium transport adapted to cooperate to cause donor materials to be transferred to a receiver medium in an imagewise fashion; a display device interface being adapted to receive the display device and to position the display device so that a display device electrical connector can form an electrical connection with the electrical interface; and a printer processor adapted to transmit signals to the display device controller influencing what is presented on the image display; wherein the display device interface is adjustably mounted to the external structure.
