

Patent Owner Symantec Corporation

Case No. IPR2013-00150
U.S. Patent No. 7,093,086

Hearing: May 5, 2014

'086 Patent - Challenged Claim

Claim 1: A computer readable medium storing a plurality of instructions which, when executed:

- (i) capture a state of a first **virtual machine *executing*** on a first computer system, wherein the state of the first virtual machine corresponding to a point in time of execution of the first virtual machine, wherein the first virtual machine comprises at least one virtual disk storing at least one file used by an **application *executing*** in the first virtual machine, and wherein the first virtual machine comprises the at least one file; and
- (ii) copy at least a portion of the state to a destination separate from the first computer system, wherein the first virtual machine is performed responsive to a suspend command.

Claim 11: The computer readable medium as recited in claim 1 wherein the instructions further comprise: creating a new log of uncommitted updates for each virtual disk in the first virtual machine and creating a memory area to capture writes to a memory area of the first virtual machine, such that **the first virtual machine can continue executing**.

(57) **ABSTRACT**
 One or more computer systems, a carrier medium, and a method are provided for backing up virtual machines. The backup may occur, e.g., in a backup medium or to a disaster recovery site, in various embodiments. In one embodiment, an apparatus includes a computer system configured to execute at least a first virtual machine, wherein the computer system is configured to: (i) capture a state of the first virtual machine; the state corresponding to a point in time in the execution of the first virtual machine; and (ii) copy or store a portion of the state to a destination separate from a storage device to which the first virtual machine is suspendable. A carrier medium may include instructions which, when executed, cause the above operation on the computer system. The method may comprise the above highlighted operations.

“Capture A State Of A First Virtual Machine Executing On A First Computer System”

U.S. Patent Aug. 15, 2006 Sheet 8 of 8 US 7,093,086 B1

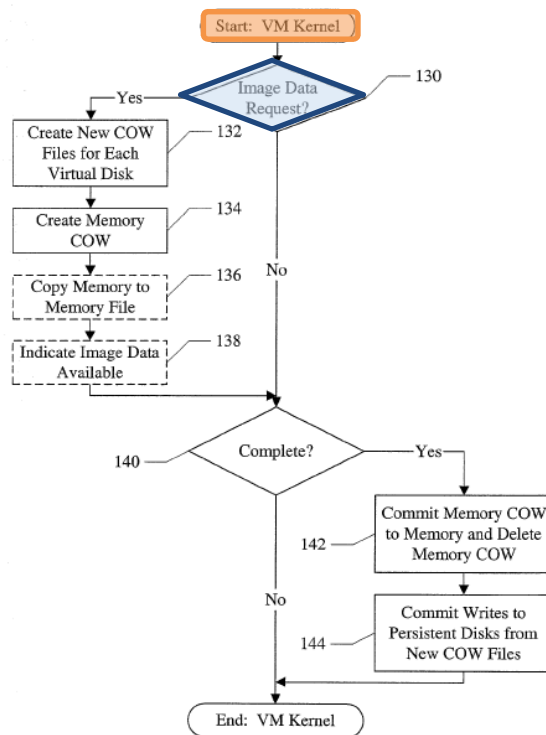

Fig. 8

In response to the image data request, the VM kernel 18 may create the "new" COW files for each virtual disk (whether persistent or non-persistent) in the virtual machine. The new COW file 74A may be used for subsequent updates to the corresponding virtual disk in this manner, **the state of the COW files 74 (which contain the updates prior to the image data request, back to at least the time of the image data request or suspension of the virtual machine) and the virtual disk files 72 remain constant even if the virtual machine 16A continues to execute**, since subsequent updates are directed to the new COW files ... Therefore, the COW files 74 and the disk files 72 may be backed up by the backup program 42 without the files being updated during the backup. (Col. 11:42-57)

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
