# Claims 1 and 12

1. A computer readable medium storing a plurality of instructions comprising instructions which, when executed:
  - (i) capture a state of a first virtual machine executing on a first computer system, the state of the first virtual machine corresponding to a point in time in the execution of the first virtual machine, wherein the first virtual machine comprises at least one virtual disk storing at least one file used by at least one application executing in the first virtual machine, and wherein the state of the first virtual machine comprises the at least one file; and
  - (ii) copy at least a portion of the state to a destination separate from a storage device to which the first virtual machine is suspendable, wherein suspending the first virtual machine is performed responsive to a suspend command.

12. An apparatus comprising: a first computer system configured to execute at least a first virtual machine, wherein the first computer system is configured to:
  - (i) capture a state of the first virtual machine, the state corresponding to a point in time in the execution of the first virtual machine, wherein the first virtual machine comprises at least one virtual disk storing at least one file used by at least one application executing in the first virtual machine, and wherein the state of the first virtual machine comprises the at least one file; and
  - (ii) copy at least a portion of the state to a destination separate from a storage device to which the first virtual machine is suspendable, wherein suspending the first virtual machine is performed responsive to a suspend command.

**U.S. Patent No. 7,093,086**

**IPR2013-00150**

## Claims 11 and 22

11. The computer readable medium as recited in claim 1 wherein (i) comprises creating a new log of uncommitted updates for each virtual disk in the first virtual machine and creating a memory area to capture writes to a memory of the first virtual machine, such that the first virtual machine can continue executing during (ii).

22. The apparatus as recited in claim 12 wherein (i) comprises creating a new log of uncommitted updates for each virtual disk in the first virtual machine and creating a memory area to capture writes to a memory of the first virtual machine, such that the first virtual machine can continue executing during (ii).

# The independent claims are not limited to “backup”

1. A computer readable medium storing a plurality of instructions comprising instructions which, when executed:
  - (i) capture a state of a first virtual machine executing on a first computer system, the state of the first virtual machine corresponding to a point in time in the execution of the first virtual machine, wherein the first virtual machine comprises at least one virtual disk storing at least one file used by at least one application executing in the first virtual machine, and wherein the state of the first virtual machine comprises the at least one file; and
  - (ii) copy at least a portion of the state to a destination separate from a storage device to which the first virtual machine is suspendable, wherein suspending the first virtual machine is performed responsive to a suspend command.

2. The computer readable medium as recited in claim 1 wherein the destination is a **backup medium** coupled to the first computer system and used to **backup data** from the first computer system.

“[T]he backup program 42, the checkpoint program 76, and/or the recovery program 78 (or portions thereof) **may be implemented as part of the VM kernel.**” (’086 patent, 14:11-14.)

**U.S. Patent No. 7,093,086**  
**IPR2013-00150**

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
