Word Origin and History for cycle

n.

late 14c., from Late Latin *cyclus*, from Greek *kyklos* "circle, wheel, any circular body, circular motion, cycle of events," from PIE **kwel-* "to roll, to move around, wheel" (cf. Sanskrit *cakram* "circle, wheel," *carati* "he moves, wanders;" Avestan *caraiti* "applies himself," *c'axra* "chariot, wagon;" Greek *polos* "a round axis" (PIE **kw-* becomes Greek *p-* before some vowels), *polein* "move around;" Latin *colere* "to frequent, dwell in, to cultivate, move around," *cultus* "tended, cultivated," hence also "polished," *colonus* "husbandman, tenant farmer, settler, colonist;" Lithuanian *kelias* "a road, a way;" Old Norse *hvel*, Old English *hweol* "wheel;" Old Russian *kolo*, Polish *koło*, Russian *koleso* "a wheel").

v.

1842, "revolve in cycles," from cycle (/browse/cycle) (*n.*). Meaning "to ride a bicycle" is from 1883. Related: *Cycled*; *cycling*.

cycle in Technology

unit

A basic unit of computation, one period of a computer clock

(<http://dictionary.reference.com/browse/clock>).

Each instruction (<http://dictionary.reference.com/browse/instruction>) takes a number of clock cycles. Often the computer can access its memory once on every clock cycle, and so one speaks also of "memory cycles".

Every hacker (<http://dictionary.reference.com/browse/hacker>) wants more cycles (noted hacker Bill Gosper describes himself as a "cycle junkie"). There are only so many cycles per second, and when you are sharing a computer the cycles get divided up among the users. The more cycles the computer spends working on your program rather than someone else's, the faster your program will run. That's why every hacker wants more cycles: so he can spend less time waiting for the computer to respond. The use of the term "cycle" for a computer clock period can probably be traced back to the rotation of a generator generating alternating current though computers generally use a clock signal which is more like a square wave (<http://dictionary.reference.com/browse/square%20wave>). Interestingly, the earliest mechanical calculators, e.g. Babbage's Difference Engine (<http://dictionary.reference.com/browse/Difference%20Engine>), really did have parts which rotated in true cycles.

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
