INTRODUCTION

About This Manual

Thank you for choosing the GARMIN NavTalk. To get the most from your new NavTalk, take the time to read through this owner's manual in order to understand all of the operating features. This manual is organized into seven sections for your convenience:

The **Introduction To Cellular Phone and GPS Features** section gives you an overview of the NavTalk functional features.

The **Getting Started** section introduces you to the basic features to get you started using the Cellular Phone and GPS Receiver features.

The two **Basic Operation** sections get you started on using the NavTalk for basic Phone and GPS uses

The two **Reference** sections (Cellular Phone and GPS Receiver) provide details about the advanced features of the NavTalk according to topic.

The **Appendix** section contains information on items such as charging the battery, accessories, specifications, glossary of terms, and index.

Before getting started, check to see that your NavTalk package includes the following items. If you are missing anything, please contact your dealer immediately.

Standard Package:

- NavTalk Unit
- Trickle Charger
- Carry Lanyard
- NiMH* Battery Pack
- Owner's Manual
- Quick Reference Guide

Refer to Section 7 - Appendix A, for a list of additional accessories available from your Garmin Dealer.

*Rechargeable Nickel Metal Hydride Battery Cell

INTRODUCTION

Cautions and Warnings

Exposure to Radio Frequency Signals- Your wireless hand-held portable telephone is a low power radio transmitter and receiver. When it is ON, it receives and also sends out radio frequency (RF) signals.

In August, 1996, the Federal Communications Commission (FCC) adopted RF exposure guidelines with safety levels for hand-held wireless phones. Those guidelines are consistent with the safety standards previously set by both U.S. and international standards bodies: ANSI C95.1 (1992)*, NCRP Report 89 (1986)*, ICNIRP (1996)*

Those standards were based on comprehensive and periodic evaluations for the relevant scientific literature. For example, over 120 scientists, engineers, and physicians from universities, government health agencies, and industry reviewed the available body of research to develop the ANSI Standard (C95.1). The design of your phone complies with FCC guidelines (and those standards).

Antenna Care- Use only the supplied or an approved replacement antenna. Unauthorized antennas, modifications, or attachments could damage the phone and may violate FCC regulations.

* American National Standards Institute; National Council on Radiation Protection and Measurements; International Commission on Non-Ionizing Radiation Protection.

Phone Operation- NORMAL POSITION: Hold the phone as you would any other telephone with the antenna pointed up and over your shoulder.

TIPS ON EFFICIENT OPERATION: For your phone to operate most efficiently: Do not touch the antenna unnecessarily when the phone is in use. Contact with the antenna affects call quality and may cause the phone to operate at a higher power level than otherwise needed.

Electronic Devices- Most modern electronic equipment is shielded from RF signals. However, certain electronic equipment may not be shielded against the RF signals from our wireless phone. **Pacemakers:** The Health Industry Manufacturer's Association recommends that a minimum separation of six (6") inches be maintained between a handheld wireless phone and a pacemaker to avoid potential interference with the pacemaker. These recommendations are consistent with the independent research by and recommendations of Wireless Technology Research. **Persons with pacemakers:** Should ALWAYS keep the phone more than six inches from their pacemaker when the phone is turned ON; Should not carry the phone in a breast pocket, Should use the ear opposite the pacemaker to minimize the potential for interference. If you have any reason to suspect that interference is taking place, turn your phone OFF immediately.

Other Medical Devices- If you use any other personal medical device, consult the manufacturer of your device to determine if they are adequately shielded from external RF energy. Your physician may be able to assist you in obtaining this information. Turn you phone OFF in health care facilities when any regulations posted in these areas instruct you to do so. Hospitals and health care facilities may be using equipment that could be sensitive to external RF energy.

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
