## I. INTRODUCTION

Pursuant to 35 U.S.C. §§ 311-319, Unified Patents Inc., (“Unified” or “Petitioner”) petitions the PTAB to institute *inter partes* review of claims 1, 4, 6, 7, 10-13, and 16 of U.S. Patent No. 8,706,627 to Shore (“the ’627 Patent,” EX1001).

The challenged claims use many words to recite several simple and obvious concepts directed to a remote, handheld, ticket-purchasing system. Beyond these simple, obvious concepts, the claims are packed with long-known and conventional hardware limitations found in virtually every wireless, handheld device of the time, like “wireless communications hardware,” “a data storage device,” “a user input device,” “a microprocessor,” etc. Tellingly, the ’627 Patent itself even admits that wireless, handheld devices, such as PDAs, were well known before the ’627 patent’s earliest priority date, Feb. 10, 2000. (EX1001, 25:13-14<sup>1</sup>; 8:45-48; 9:12-14). Thus, the only allegedly “inventive” aspect of the ’627 Patent is its secure-purchase functionality, but that too was well known before 2000.

In fact, the claimed functionality amounts only to accessing a website, requesting an “authorization certificate” (or electronic ticket), exchanging payment and security information, downloading the certificate, and storing the certificate in memory. (EX1001, cl. 1; Figs. 12a-12d). All these steps were well known before 2000. (*See, e.g.*, EX1005, Fig. 5). Because the ’627 Patent claims well-known

functionality performed by an admittedly well-known wireless, handheld device, the challenged claims should be canceled as obvious.
