Patent Owner

Patent No. 8,073,557  
Issue Date: December 6, 2011  
Title: MOTION CONTROL SYSTEMS

---

*Inter Partes* Review No. 2017-00049

---

**PETITION FOR *INTER PARTES* REVIEW  
UNDER 35 U.S.C. §§ 311-319 AND 37 C.F.R. § 42.100 *ET SEQ.***

**TABLE OF CONTENTS**

NOTICE OF LEAD AND BACKUP COUNSEL .....1

NOTICE OF EACH REAL-PARTY-IN-INTEREST .....1

NOTICE OF RELATED MATTERS .....1

NOTICE OF SERVICE INFORMATION .....2

GROUNDS FOR STANDING .....2

STATEMENT OF PRECISE RELIEF REQUESTED .....2

THRESHOLD REQUIREMENT FOR *INTER PARTES* REVIEW .....2

STATEMENT OF REASONS FOR RELIEF REQUESTED .....3

I. INTRODUCTION .....3

II. THE '557 PATENT .....4

III. LEVEL OF ORDINARY SKILL IN THE ART .....11

IV. CLAIM CONSTRUCTION UNDER 37 C.F.R. §42.104(B)(3) .....11

V. TECHNICAL BACKGROUND AND INTRODUCTION OF APPLIED PRIOR ART REFERENCES .....16

    A. Device Drivers and Hardware Independence Were Well Known Long Before the '557 Patent. ....16

        1. Device Drivers and Hardware Independence in Microsoft's Prior Art Operating Systems .....16

        2. Windows Open Service Architecture ("WOSA") and the Open Database Connectivity ("ODBC") Interface .....17

    B. Programmable Motion Control and Hardware-Independent Motion Control Operations Long Predated the '557 Patent .....18

    C. RGB's Development of XMC Shows that the '557 Inventors Merely Combined Known Technologies in a Predictable Way .....24

VI.	EXPLANATION OF THE GROUNDS FOR UNPATENTABILITY.....	26
A.	Obviousness: Content of the Applied Prior Art References .....	26
1.	WOSA – Cashin and ODBC Programmer’s Guide.....	26
2.	Function Tables and Streams – Brockschmidt .....	29
3.	Emulation – ODBC Programmer’s Guide.....	32
4.	Graphical Motion Control Language (“GML”).....	33
B.	Obviousness: Motivation to Combine Cashin with ODBC Programmer’s Guide, Brockschmidt and the GML References .....	37
C.	Ground 1: Claims 16, 19-22, and 27-28 Are Unpatentable as Obvious under 35 U.S.C. §103 over Cashin in View of ODBC Programmer’s Guide, and the GML References.....	40
1.	Cashin in combination with the ODBC Programmer’s Guide and the GML References disclose every limitation of the elements of claim 16.....	40
a.	[16a] “A motion control system, comprising:” .....	40
b.	[16b] “an application program comprising at least one call to at least one component function”.....	40
c.	[16c] “a plurality of motion control devices, where a plurality of unique motion controller languages are associated with the plurality of motion control devices, each controller language comprises at least some control commands for processing information associated with motion control devices, and each of the motion control devices comprises a controller capable of generating electrical signals associated with the motion control device, and a mechanical system capable of causing a motion control operation based on electrical signals generated by the controller” .....	42

d.	[16d] “a set of software drivers each comprising driver code, where” .....	44
e.	[16e] “each software driver is associated with at least one of the plurality of motion controller languages, and” .....	47
f.	[16f] “each software driver exposes a service provider interface defining a set of driver functions, where the driver functions are independent of the plurality of controller languages” .....	48
g.	[16g] “at least one driver function is an extended driver function that is associated with a non-primitive motion operation that can be performed using at least one primitive motion operation, where the at least one primitive motion operation cannot be performed using a combination of primitive or non-primitive motion operations” .....	50
h.	[16h] “at least one driver function is a core driver function that is associated with a primitive motion operation” .....	53
i.	[16i] “the driver code of at least one software driver associates at least one driver function with at least one control command of the at least one motion controller language associated with at least one of the software drivers, and” .....	56
j.	[16j] “at least one selected software driver is associated with at least one selected motion control device” .....	56
k.	[16k] “a motion component comprising component code, where the motion component exposes an application programming interface comprising a set of component functions, where” .....	58

1.	[16l] “each component function is implemented by component code, and the component code associates at least one of the component functions with at least one of the driver functions” .....	61
m.	[16m] “the at least one selected software driver generates at least one control command in the controller language associated with the at least one selected motion control device based on the calls to component functions of the application program, the component code, and the driver code of the at least one selected software driver.” .....	63
2.	Cashin in combination with the ODBC Programmer’s Guide and the GML References disclose every limitation of the elements of claim 19 .....	64
a.	[19a] “A motion control system as recited in claim 16, in which the component code emulates at least one extended driver function by associating at least one component function with a plurality of the core driver functions;” .....	64
b.	[19b] “the component code implements at least one extended driver function by associating at least one component function with one of the extended driver functions; and” .....	65
	[19c] “the component code implements at least one core driver function by associating at least one component function with one of the core driver functions.” .....	65
3.	Cashin in combination with the ODBC Programmer’s Guide and the GML References disclose every limitation of the elements of claim 20 .....	66
a.	[20a] “A motion control system as recited in claim 16, in which the application program further	

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
