### 7] ABSTRACT

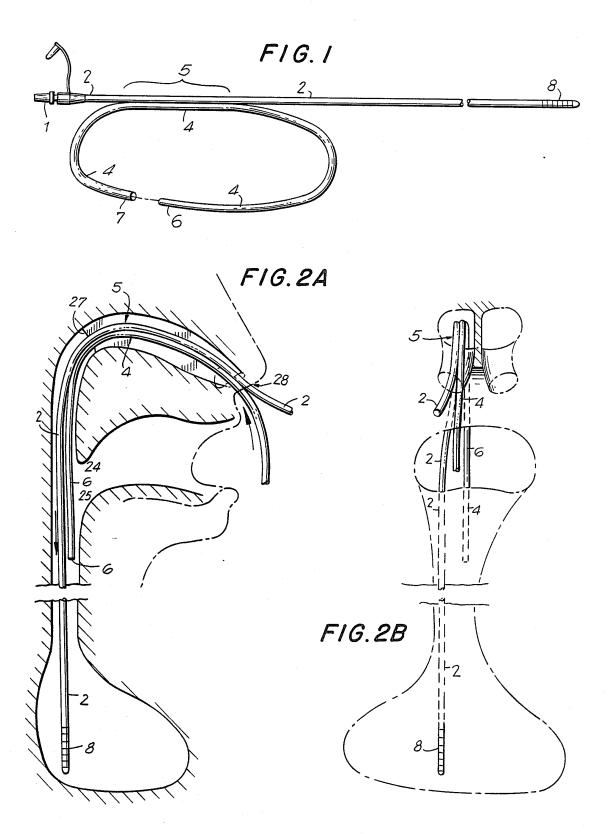

A harness for a tube for use in patient health care, particularly for naso-enteral feeding. The harness is a thin elongated length of material, preferably cylindrical or tubular, secured to a nasal tube for a distance along the length of the tube and inserted into the patient with the tube. The harness then may be secured about the patient's nasal septum so that the connection between the harness and the tube along the distance is within the patient's nostril.
