

MeetingOne and Jabber.com Team Up to Provide Advanced Business Teleconferencing Services

Feb 09, 2001, 00:00 ET from Jabber.com, Inc.

DENVER, Feb. 9 /PRNewswire/ -- MeetingOne, Corp., a leading provider of advanced business teleconferencing services and Jabber.com, Inc., provider of scalable Jabber(TM) Instant Messaging solutions and services and a subsidiary of Webb Interactive Services, Inc. (Nasdaq: WEBB), today announced they have entered into a comprehensive multifaceted strategic marketing, development, referral and customer relationship.

Under the agreement, Jabber.com will provide MeetingOne's development department with professional services for the integration of Jabber into MeetingOne's Click & Meet(TM) advanced teleconferencing platform. The integrated solution will propose to MeetingOne customers a new MeetingOne branded IM client that has been enhanced to allow for instant Click & Meet(TM) capabilities. MeetingOne customers today enjoy advanced teleconferencing services through a simple, easy-to-use, permanent and personalized toll free conference room phone number. This number allows companies to instantly initiate a teleconference with integrated Web collaboration tools including online voting, file sharing, website co-browsing and more. Enhanced by customized Jabber technology, MeetingOne users will now be able to initiate teleconferencing right from their desktop by highlighting users within their instant messaging client and selecting a single button to teleconference.

"We strongly believe that the right combination between text, voice and video, enhanced by an interoperable and reliable presence detection system is the future of teleconferencing for our customers. Jabber.com is the perfect partner for MeetingOne to make this vision a reality. The new strategic agreement with Jabber will bring to MeetingOne and its customers a wonderful opportunity to rapidly benefit from the integration of these technologies and our Click & Meet(TM) architecture. MeetingOne's customers experience will be exponentially enhanced," said Pascal Lenoir, President and CEO of MeetingOne, Corp.

As part of a larger on-going relationship, MeetingOne will become a customer by upgrading to Jabber.com's Commercial Server v2.0 when it becomes available at the end of Q1, 2001. The companies will also jointly promote their respective and combined solutions and cooperate in joint marketing opportunities and channel development.

"This kind of advanced integration between today's teleconferencing capabilities and instant messaging are going to re-define and expand the concept of what it means to instant message. Instant voice, instant teleconferencing, instant video are all well within the scope of the Jabber platform as fundamentally, Jabber is the only extensible platform for real-time communications and presence management. We're pleased to announce MeetingOne as both a customer and partner and we're looking forward to providing enhanced teleconferencing services through our integrated products," said Andre Durand, founder of Jabber.com.

About MeetingOne, Corp.

MeetingOne(TM), Corp. is a provider of on-demand, user-controlled teleconferencing and multimedia collaboration services headquartered in Denver, CO. MeetingOne leverages a unique set of proprietary technologies and a user-friendly, Web-enabled graphical interface to provide its customers with a comprehensive teleconferencing/multimedia collaboration service offering. Unlike most traditional teleconferencing companies that require users to make reservations and yield control of conference sessions to the service provider, MeetingOne's services provide unsurpassed flexibility and autonomy to its customers.

About Jabber.com

Jabber.com, Inc., a subsidiary of Webb Interactive Services (Nasdaq: WEBB), is the premiere provider of commercial Jabber solutions, products and services targeting the enterprise and service provider markets. Jabber is the only open source instant messaging (IM) platform that leverages XML technology and a distributed client/server architecture to give each company complete control over their IM services, applications and branding. Jabber's robust development tools and extensible architecture make it ideal for deploying any application that requires real-time XML messaging and presence management. Jabber's web site can be found at www.jabber.com.

About Webb Interactive

Webb Interactive Services Inc. provides innovative online commerce communication solutions that help small businesses generate leads, increase buyer-seller interaction and strengthen customer relationships. Webb has pioneered an advanced XML-based technology platform, upon which application modules that lead the convergence of instant messaging and commerce are built. Webb's web site can be found at www.webb.net.
