(57) **ABSTRACT**

A wireless digital audio system includes a portable audio
source with a digital audio transmitter operatively coupled
thereto and an audio receiver operatively coupled to a head-
phone set. The audio receiver is configured for digital wire-
less communication with the audio transmitter. The digital
audio receiver utilizes fuzzy logic to optimize digital signal
processing. Each of the digital audio transmitter and receiver
is configured for code division multiple access (CDMA) com-
munication. The wireless digital audio system allows private
audio enjoyment without interference from other users of
independent wireless digital transmitters and receivers shar-
ing the same space.
