Internet Archive 300 Funston Avenue San Francisco, CA 94118

AFFIDAVIT OF CHRISTOPHER BUTLER

- 1. I am the Office Manager at the Internet Archive, located in San Francisco, California. I make this declaration of my own personal knowledge.
- 2. The Internet Archive is a website that provides access to a digital library of Internet sites and other cultural artifacts in digital form. Like a paper library, we provide free access to researchers, historians, scholars, and the general public. The Internet Archive has partnered with and receives support from various institutions, including the Library of Congress.
- 3. The Internet Archive has created a service known as the Wayback Machine. The Wayback Machine makes it possible to surf more than 450 billion pages stored in the Internet Archive's web archive. Visitors to the Wayback Machine can search archives by URL (i.e., a website address). If archived records for a URL are available, the visitor will be presented with a list of available dates. The visitor may select one of those dates, and then begin surfing on an archived version of the Web. The links on the archived files, when served by the Wayback Machine, point to other archived files (whether HTML pages or images). If a visitor clicks on a link on an archived page, the Wayback Machine will serve the archived file with the closest available date to the page upon which the link appeared and was clicked.
- 4. The archived data made viewable and browseable by the Wayback Machine is compiled using software programs known as crawlers, which surf the Web and automatically store copies of web files, preserving these files as they exist at the point of time of capture.
- 5. The Internet Archive assigns a URL on its site to the archived files in the format http://web.archive.org/web/[Year in yyyy][Month in mm][Day in dd][Time code in hh:mm:ss]/[Archived URL]. Thus, the Internet Archive URL http://web.archive.org/web/19970126045828/http://www.archive.org/ would be the URL for the record of the Internet Archive home page HTML file (http://www.archive.org/) archived on January 26, 1997 at 4:58 a.m. and 28 seconds (1997/01/26 at 04:58:28). A web browser may be set such that a printout from it will display the URL of a web page in the printout's footer. The date assigned by the Internet Archive applies to the HTML file but not to image files linked therein. Thus images that appear on a page may not have been archived on the same date as the HTML file. Likewise, if a website is designed with "frames," the date assigned by the Internet Archive applies to the frameset as a whole, and not the individual pages within each frame.
- 6. Attached hereto as Exhibit A are true and accurate copies of printouts of the Internet Archive's records of the HTML files for the URLs and the dates specified in the footer of the printout (or attached coversheet where the URL in the footer has been truncated).
 - 7. I declare under penalty of perjury that the foregoing is true and correct.

DATE: 8/9/18

Christopher Butler

My Comm. Expires Nov 17, 2020

Subscribed and sworn to (or affirmed) before me on this

9 day of August , 2018, by

Christopher Butler,

proved to me on the basis of satisfactory evidence to be the person who appeared before me.

Signature:

Exhibit A

Frank Shipman

Assistant Professor

<u>Center for the Study of Digital Libraries</u> &

<u>Hypermedia Research Laboratory</u>

<u>Department of Computer Science</u>

<u>Texas A&M; University</u>

College Station, <u>Texas</u> 77843-3112

Standard bio stuff:

Frank has been pursuing research in the areas of hypermedia, computer-supported cooperative work, and intelligent user interfaces since 1987. Frank's doctoral work in the Human-Computer Communications research group at the University of Colorado and subsequent work at Xerox PARC and Texas A&M; has investigated combining informal and formal representations in interfaces and methods for supporting incremental formalization. Frank has aided in the design and development of a number of collaborative hypermedia systems including the Virtual Notebook System, the Hyper-Object Substrate, and VIKI.

See a more complete vitae.

What Frank is up to:

- teaching CPSC 320 (undergraduate artificial intelligence)
- proceedings chair for <u>ACM Digital Libraries '98</u> and <u>ACM Hypertext '98</u>
- Spatial hypertext research -- in particular, VIKI
- enabling guided paths over WWW information
- supporting incremental formalization with HOS
- network information director for ACM's Special Interest Group on Hypertext (SIGLINK)

DOCKET

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time** alerts and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
