(57) **ABSTRACT**

A programmable light timer for implementing a timing pattern is described. The programmable light timer comprises a wireless receiver for receiving a location; a programming interface having one or more actuators enabling a selection of an on time or an off time associated with a programmable button for implementing the timing pattern; and a display responsive to the programming interface for displaying a time selected using the programming interface; wherein the programming interface enables selecting either dusk or dawn as an on time or an off time of the timing pattern.
