

**Declaration of Harold Ogle Regarding JSR-000120
“Wireless Messaging API (WMA) for Java™ 2 Micro Edition Version 1.0”**

I, Harold Ogle, based on my personal knowledge and information, hereby declare as follows:

I am an employee of Oracle America, Inc., successor-in-interest to Sun Microsystems, Inc., and hold the position of Program Manager in the Program Management Office (“PMO”), which I have held since 15 February 2010. Prior to 15 February 2010, I was an employee of Sun Microsystems, Inc. and held the office of Program Manager in the PMO from May 2000.

Oracle America, Inc. operates the Java Community Process (“JCP”) website (www.jcp.org), which serves as the repository for documents relating to the Community Development of Java Technology Specifications.

Java Specifications are developed and approved through the Java Specification Request (“JSR”) process. The PMO publishes in an online repository drafts, releases and other documents throughout the JSR process. The PMO establishes a dedicated public JSR webpage on the JCP website for each Specification approved for development or revision that contains a history of the passage of the Specification, including a record of the decisions, actions, and votes taken by the Executive Committee with respect to the Specification’s development through the JSR process.

Among my responsibilities as Program Manager, I act as a custodian of records relating to the JSR process, and I am familiar with the record keeping practices relating to that process, including the creation and maintenance of each Specification’s dedicated public JSR webpage.

I make this declaration based on my personal knowledge and information contained in the business records of the JCP and PMO as they are published on www.jcp.org, or on my confirmation with other responsible PMO personnel with such knowledge.

When a new draft, release, or other document is published, an announcement of its publication, with information on how to access the draft, release, or other document, is typically sent out to JCP members within 24 hours of the publication.

Any draft, release or other document published on the JCP website was reasonably accessible to the public and was disseminated or otherwise available to the extent that persons interested and ordinarily skilled in the subject matter or art exercising reasonable diligence could have located it easily. In particular, the title and description of each JSR are indexed (for example, by platform, technology, stage, and committee) and placed in a public online repository with descriptive links to the documents published on the applicable JSR webpage. There is also a search feature that allows the fields of JSR Title and JSR Description to be searched using user-inputted, free-form text.

The drafts, releases, and other documents are published and kept in an online repository in the course of the PMO's regularly conducted activity and ordinary course of business. The records are made pursuant to established JCP procedures and are relied upon by the PMO and other JCP personnel and members in the performance of their functions.

It is the regular practice of the PMO to make, keep, and publish the JCP records.

Based on the business records of the JCP and the PMO's course of conduct in publishing drafts, releases and other documents relating to JSRs, I have determined that the publication date of the Specification associated with JSR-000120, entitled "Wireless Messaging API (WMA) for Java™ 2 Micro Edition Version 1.0," was no later than August 21, 2002, at which time it was reasonably accessible to the public on the JCP website. A copy of that Specification is attached to this declaration as Exhibit A.

Pursuant to Section 1746 of Title 28 of United States Code, I declare under penalty of perjury under the laws of the United States of America that the foregoing is true and correct and that the foregoing is based upon personal knowledge and information and is believed to be true.

Signed:

Harold Ogle

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
