VII. Professional Experience

Details of My Professional Accomplishments

US Government at National Science Foundation (3 years)

In 2007 and 2008, I worked as the lead Program Director for Emerging Models and Technologies (EMT) program in the Division of Computing and Communication Foundations (having nearly \$140 Million annual budget) of the Directorate for Computer and Information and Science and Engineering, National Science Foundation, Arlington, Virginia. My mandate was to manage research grants in Nanoelectronic Modeling and Systems, Quantum Computing, and Biologically Inspired Computing for which I had an operating annual budget of about \$18 Million. Additionally, I participated in several NSF crosscutting programs such as Cyber-Enabled Discovery and Innovation (CDI), Expeditions in Computing, Major Research Instrumentation (MRI), Computing Research Infrastructure (CRI) and Cyber Physical Systems (CPS). In 2009, I worked as a Program Director in the Engineering

Directorate where I managed research in three broad areas: Adaptive Intelligent Systems (Machine Learning), Quantum, Molecular and High-Performance Modeling, and Electronic and Photonic Devices. During these three years, I interacted with several program managers and administrators of NSF, DARPA, ARO, ONR, and AFOSR to help launch national-level major research initiatives. I consider that serving the US government for a stint of three years has provided me an exceptional opportunity to acquire a vast amount of knowledge in various fields of science and engineering, to network with numerous researchers around the nation, and to gain divergent administrative experience.

Teaching Experience (29 years)

Since 1988, I have been teaching at the Department of Electrical Engineering and Computer Science of the University of Michigan, Ann Arbor, Michigan.

Graduate courses developed and taught: 1) VLSI System Design, 2) Optimization and Synthesis of VLSI Layout, 3) Testing of Digital Circuits and Systems, 4) Advanced Computer Architectures, 5) Nanocircuits and Nanoarchitectures, 6) Ultra-Low-Power Subthreshold CMOS Circuits, and 7) Terahertz Technology and Applications.

Undergraduate courses upgraded and taught: 1) Introduction to Digital Logic Design (sophomore level), 2) Digital Integrated Circuit Design (junior level), and 3) VLSI System Design (senior level).

Industrial Experience (6.5 years)

After my baccalaureate degrees in Physics and Electrical Engineering, I worked for six years (1976-1982) as a Senior R&D Engineer at Bharat Electronics Ltd. (BEL) in its Integrated Circuits Division. I designed several bipolar and CMOS analog and digital integrated circuits for consumer electronic systems. I was associated with the following chip development projects: i) Raster-scan vertical deflection system microchip for TV display, ii) Sync processing and horizontal deflection system microchip for TV display, iii) Video and audio IF stage IC's for vestigial-AM and FM signal detection in TV receiver, iv) High-gain audio amplifier microchip for TV audio stage, v) Tape Recorder IC with automatic gain adjustments, vi) Hearing-aid IC, vii) Analog clock driver IC, and viii) LCD and AC Plasma display drive IC's. Several million commercial chips were fabricated based on these designs.

After finishing my MSc degree in Computer Science and while working towards my PhD degree in Electrical and Computer Engineering, I worked during the summers of 1985 and 1986 as a Member of Technical Staff at AT&T Bell Laboratories. I was one of the two engineers who started the Bell Laboratory *Cones/Spruce* project - a new behavioral synthesis and layout automation tool for rapid prototyping of digital circuits. The main contribution of this effort was to demonstrate how a restricted version of C language could be used to model digital hardware much before commercial hardware description language (HDL) software tools like Verilog and System C were designed.

Teaching Accomplishments and Evaluations:

I have endeavored to pursue multidimensional education frontiers that transcend the confines of classroom and impact students as well as other professionals alike. My teaching contributions include authoring an undergraduate textbook and a video book, developing four advanced graduate courses, developing courseware for practicing engineers in industry, editing special issues in professional journals to stimulate research in emerging technologies, and fostering STEM education for K-12 students. Highlights of my teaching accomplishments are enumerated below:

- Breakdown of my course offering at the University of Michigan over the past 30 years: (i) nearly 60% of courses I taught are on *three* undergraduate courses for sophomore, junior and senior; approximately 10% of courses are on *two* regular graduate courses; and about 30% of courses are on *four* new graduate courses designed and developed by me to promote the state-of-the-art CMOS research and train the future engineering workforce. I have taught *three* distinct undergraduate and *six* graduate courses at the University of Michigan.
