(57) **ABSTRACT**

The invention relates to a method for securing the trustworthiness of an electronic device. At least first and second check-up data are stored in the electronic device. In the method, a boot program is started, in which boot program at least first and second boot steps are taken. In the first boot step, the trustworthiness of said at least first check-up data is examined, wherein if the check-up shows that said at least first check-up data is trusted, said second check-up data related to at least the second boot step is examined to confirm the trustworthiness of the second boot step. If the check-up shows that at least one second check-up data related to the second boot step is trusted, said second boot step is taken after said first boot step.
