Method and systems for providing online gaming to a plurality of players through a network, such as the Internet is disclosed. A server enables the plurality of players on remote terminals to access a game application in the memory in the server through the network. A processor on the server monitors the activity of each of the plurality of players while accessing the game application to determine an activity level of each of the plurality of players. It also compares the activity level of each of the plurality of players and causes a reward to be issued to one or more of the plurality of players based on the comparison of the activity level of each of the plurality of players. Various levels of rewards are contemplated.
