- Magnetic field strength up to 1,5 Tesla
- Possibility of fixing the applicator

Brochure: [ENG](#) | [SLO](#) | [HR](#)

How does a magnetic field activate a muscle?

Rapid changes of magnetic field intensity induce an electrical current in the neuron. This phenomenon is called electromagnetic induction. Once the current reaches a certain value, a so-called neuron action potential is achieved. This causes the neuron cell to depolarize, which eventually leads to a complete muscle contraction.

What are the advantages of TESLA Stym FMS, Functional Magnetic Stimulation?

- FMS allows stimulation of deep muscle structures that cannot be reached by FES
- FMS effectively stimulates muscle tissue without direct skin contact
- FMS is painless, noninvasive and thus suitable for patients where FES cannot be used
- The applicator can be fixed to the body or the therapist can perform therapy manually
- Manually moving the applicator allows motor units to be found easily, enabling effective stimulation
- No negative side effects are known in the literature as long as contraindications are taken into account

Indications:

- Musculoskeletal disorders: degenerative arthritis, rheumatoid arthritis, cervical pain, muscle pain
- Spinal disorders: acute/chronic lumbago, hip gout (sciatica), spina bifida, spondylitis
- Nerve disorders: peripheral nerve damage
- Muscle relaxation, frozen shoulder
- Nerve or muscle rehabilitation after fractures
- Pain control for muscle atrophy, spasm, ankylosis
- Genitourinary diseases: prostate pain
- Acute pain control
- Sports injuries
