(57) **ABSTRACT**

A method and a modular direct current power distribution system. A distribution panel may receive alternating current power with a voltage range between 200 volts and 15000 volts. A modular rectifier may convert the alternating current power from the distribution panel to direct current power with a range of 250 volts to 600 volts. An end feed box may receive alternative energy power from an alternative energy power source. A power pathway module may distribute the direct current power from the modular rectifier to a set of information and communication technology equipment. An electrical protection system may guard against electrical damage.
