EXHIBIT A

Due to the recent outbreak for the Coronavirus (COVID-19) the World Health Organization is giving away vaccine kits. Just pay \$4.95 for shipping.

You just need to add water, and the drugs and vaccines are ready to be administered. There are two parts to the kit: one holds pellets containing the chemical machinery that synthesises the end product, and the other holds pellets containing instructions that tell the drug which compound to create. Mix two parts together in a chosen combination, add water, and the treatment is ready.

HERE ARE WHAT RECENT USERS ARE SAYING

Guido Zambrano Torre

The coronavirus probably has a stronger ability to spread than the World Health Organization has estimated so far.

Isabel Jara

The higher the number, the more transferable the virus is and the higher the risk for rapid spread. When the reproduction number falls below 1.0, the epidemic is likely to die out.

Magdaliza Negreira

Our review shows that the coronavirus is at least as transmissible as the SARS virus. And that says a great deal about the seriousness of the situation.

Albert Jing

The studies consisted of estimations of the growth rate based upon the cases observed in the Chinese population, and based upon statistical and mathematical methods.

Mitch and Stacey

The World Health Organization estimates that the coronavirus has a transmissibility, expressed as a reproduction number, of between 1.4 and 2.5. A reproduction number is a measurement of how many people a contaminated person transmits the virus to in a previously healthy population.

Melissa Grafster

When looking at the development of the corona epidemic, reality seems to correspond well to or even exceed the highest epidemic growth in our calculations. Despite all intervention and control activities, the coronavirus has already spread to a significantly higher extent than SARS did!
