## ALL-IN-ONE - FEATURES & FUNCTIONALITIES

SkuSuite powers many businesses both small & large throughout the USA and growing! References available upon request.

## WHAT IS SKUSUITE

SkuSuite is a cloud based inventory/warehouse order management software that is focused on streamlining business processes. With years of experience selling in both B2B-Wholesale & B2C-Ecommerce on multiple channels we unable to find the ultimate ALL-IN-ONE software to help us solve our internal pain points. In September of 2013 we decided to build our own system after wasting countless hours and thousands of dollars.

## BENEFITS OF USING SKUSUITE

Our experience being a seller selling millions of dollars worth of inventory each month, having a better system became a requirement. SkuSuite helps our core clients keep track of all their inventory and orders in one centralized login with many features and functionalities.

- ✓ Inventory/Warehouse Order Management Software
- ✓ Easily synced with multiple channels
- ✓ Unique Order Processing System
- ✓ Perfect for Wholesalers, Retailers, Ecommerce & Mail Order
- ✓ & Much More

### PAIN POINTS WE HELP SOLVE:

#### 1 Product & Inventory Management

Have all your products housed in one platform. This makes it easy for SkuSuite to then sync with any open-api your full catalog. Businesses also must know what their total inventory asset value is at all times. Cost of goods are depreciated everyday. If you dont have a full grasp over your inventory levels & movements, it's almost impossible to run a successful multi-channel company. This is why SkuSuite requires inventory on hand to be available for any order or else validation rules will prevent from allowing it to be processed. We also help prevent from over-selling with automated inventory syncing.
