### Protect Your Home From Termites With Our Help

Termites have been going after your home for years. Now, the Sentricon System lets you go after their home - the colony. Colony elimination is a completely new way to deal with termites, and Sentricon will achieve it.

The Sentricon System is the best approach for protecting structures from subterranean termites because it eliminates the colony while being non-disruptive to property owners. The Sentricon System offers proven, long-term protection against termite damage.

[Contact Shoop's Texas Termite & Pest Control](#) to discuss your needs, and check out our [Sentricon](#) page for additional product details.

### Conventional Liquid Barrier Treatment

Shoop's Texas Termite is a certified Termidor applicator. Termidor is America's first 100% termite solution. Termidor is a new type of non-repellent termite barrier control that has faced rigorous and thorough testing by US and foreign researchers. Without exception, Termidor consistently returned 100% effective results whenever and wherever it was used.

Once a termite has ingested or contacted Termidor-treated material with its body, it becomes a "carrier." Every termite it contacts will be infected and will, in turn, infect every termite it contacts. Termidor works slowly, letting termites contact many others before dying themselves.

Although the "transfer effect" on individual termites is intentionally slow, the overall colony management is fast.

"They will help you anyway that they can with your pest control needs. Did a wonderful job about getting rid of carpenter ants from my huge pecan trees and my house without hurting the baby birds in the tree. Very knowledgeable, very pleasant people."

### Providing Quality Pest Control Services Since 1932

The company began as Texas Termite and was founded by F.E. "Forrest Edward" Shoop Sr.

The small-town company was first established in the back of a humble house on Filmore Street in Wichita Falls, in the year of 1932. The business consisted of F.E. Shoop Sr, his son Forrest Jr, two cousins, and one technician. The fleet included Mr. Shoop's personal vehicle and just two others. The economy (needless to say) was very impoverished, due to the stock market crash in 1929, which set off the Great Depression throughout the 1930s. This did not deter Mr. Shoop. Many homeowners, in the 1930s, realized that they had an enemy that was destroying their most valuable asset, their home. The enemy's name was Subterranean termites. To make matters worse, almost every house was built on a pier and beam structure, which gave the termite's direct access to the structures of Wichita Falls. Mr. Shoop provided a solution for the residence of Wichita falls which began to grow into a legacy for generations to come.

Currently, Shoop's is the leading termite and pest control company in Wichita Falls and the surrounding areas.

Shoop's Texas Termite & Pest Control has been voted "The Best Pest Control Company" 25 years in a row by Times Record News. They have received an array of awards and certificates from non-profit and community organizations for the donation of services, funds, and outstanding company performance.

The Shoop family is very dedicated to the community and growth of Wichita Falls. Shoop's constantly helps families and individuals in need through giveaways, donations, and their benevolence program
